

LIFE without Limits

"I'm a US Navy veteran with ALS and recently received my Obi. I can't even begin to describe how happy I am! Before Obi, eating was a horrible struggle as my shoulders and hands were failing. My alternative was to interrupt the dining experience of my friends or family members so they could feed me.

As a result of eating with Obi's assistance, I've been able to maintain my weight and, of equal importance to me, I'm able to eat independently and enjoy dining with my family.

Please know Obi is much more than a product you sell; Obi is a means to independence and restored joy while eating."

- Shelly H.

obi

The first dining
robot of its kind

MAGICAL Moments

Eating is one of life's greatest pleasures, but this isn't the case for millions of people. And we don't think that's right. We believe that everyone deserves access to independent and fulfilling dining experiences.

This mission has led us to create **Obi**, the first robotic dining companion of its kind.

INTENDED Users

Obi accommodates a spectrum of people who have difficulty feeding themselves. Diners should possess the ability to safely, and successfully, operate Obi as well as the ability to chew and swallow without assistance. Candidates for Obi may be living with the following conditions:

- Amyotrophic Lateral Sclerosis (ALS)
- Amputations
- Arthrogryposis Multiplex Congenital (AMC)
- Cerebral Palsy
- Essential Tremor
- Muscular Dystrophy
- Multiple Sclerosis
- Parkinson's Disease
- Spinal Cord Injury
- Conditions impairing upper extremity motor control

INTUITIVE Design

Obi works by automating the motion of a human arm and becomes an extension of the diner, allowing them to select the food of their choice and dictating the pace at which the food is fed to them.

Customized Delivery Position

Obi allows the caregiver to quickly position the device for optimal use and tailor the food delivery location for each diner.

Switch Operation

Controlled by switches, Obi can be operated by any part of the body that can activate the switch. Obi even works with Sip 'n' Puff attachments!

Independent Dining

The diner controls their experience through the use of accessibility switches - one to select the food, and one to command the food delivery.

Easy Cleaning

After meal time, simply wipe down Obi's base and arm with a disinfecting wipe or damp towel. The spoon, plate, and placemat can all be washed in a sink or dishwasher.

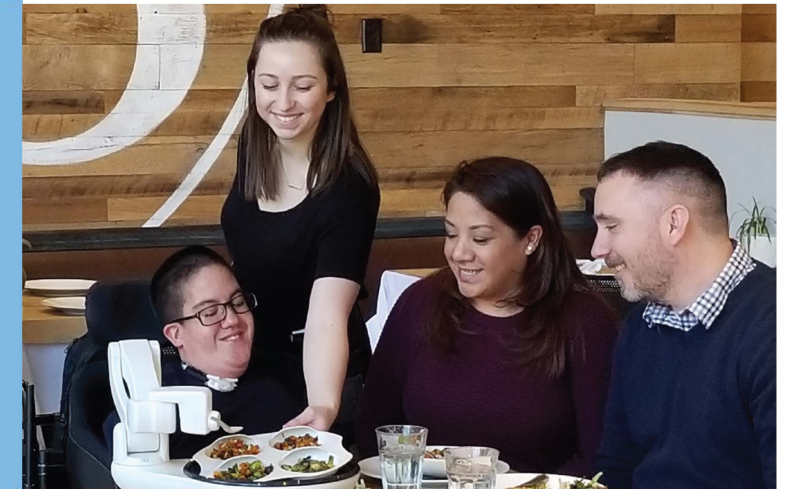

Lightweight and Portable

At 7 lbs, Obi comes equipped with a rechargeable lithium ion battery, making it perfect to pack up and eat on the go!

Dining Efficiency

Obi's patented features, including multi-directional food capturing, portion control, spoon wiping, and re-positioning, allow for optimal and efficient food delivery.
